

PARALYSER BTI

BLUETOOTH IMMOBILISER

The Paralyser BTI is a Bluetooth Immobiliser connected to a user friendly smartphone app. Designed to combat the rising problem of car theft worldwide, our new device provides car owners with unparalleled security, ensuring that only authorized users can start their vehicles. Vehicles installed with the Paralyser BTI will only start when both the factory vehicle key/remote and a paired smartphone are present in the vehicle. This Two Step verification process significantly reduces the risk of unauthorised use of your vehicle.
